Amerimax Is Committed To Green and Lean Manfacturing

The Amerimax commitment to energy conservation began in1986 with our entry to the residential replacement window market with energy saving products and we have long embraced responsible and sustainable manufacturing practices.

During the past decade Amerimax instituted "Lean Manufacturing" programs, including computer driven materials optimization. These programs maximize the use of all components, effectively reducing the amount of scrap produced in the manufacturing process, consuming fewer raw materials and significantly lessening our carbon footprint.

In the past 7 years Amerimax pioneered a number of strategies that have reduced our inbound and outbound materials handling packaging including:

The implementation of returnable steel shipping racks for vinyl and glass components that are rotated with suppliers has eliminated 90% of disposable cardboard and wood pallets previously required.

The development of a reusable corner shipping blocks for transporting completed windows to dealers now allows return and reuse of previously discarded packaging.

Amerimax's dedication to minimizing our impact on the environment carries over to every facet of our facilities where:

All possible manufacturing scrap materials are recycled.
All office waste and obsolete equipment are responsibly recycled.
All shipping routes are constantly monitored and reviewed for maximum efficiency and reduced fuel consumption.

Amerimax will always seek innovative solutions to the global energy challenges by designing and manufacturing replacement windows that are individually engineered to exceed industry standards for energy efficiency, quality and value.

Customer satisfaction will continue to remain our number-one priority. Our success allows us to offer one of the industry's strongest, most comprehensive warranties and authorized dealer support systems.

Craftsmanship and quality down to the last detail are standard features on every Craftsman Portrait Series window

From the strength of our multi-chambered frame design, to the beauty of the beveled frame, to ease of operation with a brass roller system that glides on a monorail track, every detail has been carefully crafted to make the Craftsman Portrait Series Window from Amerimax the right choice in replacement windows for today's value conscious homeowners..

Slider Detail

Integral contour pull rail provides rigidity and ease of operation

Fusion welded frame and sash construction creates superior strength and protection against outside elements

Brass roller system glides upon monorail track allowing weight dispersion and ease of operation.

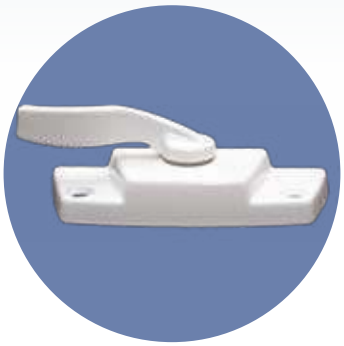
Sliding window operating sash removes easily from the inside for convenient cleaning.

Beveled exterior master frame enhances aesthetics

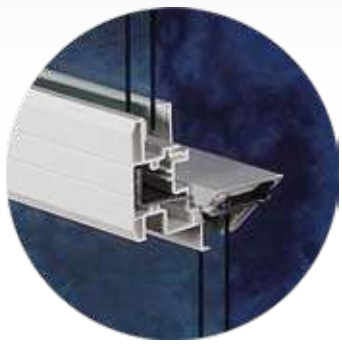
Dedicated pocket sill design with triple weather-stripping insures tight seal of operating sash against unwanted air and water infiltration

Multi-chambered slim line extrusion design for maximum strength and viewing area

Single hung Detail



Positive interlock system with triple seal, structural metal reinforcement and dual action cam locks at the meeting rail provide resistance to outside elements and forced entry.



Available in several combination frames styles and configurations

Enhanced Energy Efficient Glass Systems

The Ameriglass™ AG3 Insulated Glass System from Amerimax once again redefines the standard for energy savings, year-round comfort and ease of maintenance.

Ameriglass™ AG3 Low Emissivity glass is coated with a microscopic 12 layer patented formula with three layers of Silver, a dual seal TrueWARM® Structural Foam Spacer, Argon gas fill and innovative Neat coating that lets nature clean your windows. It's the ultimate balance of energy savings, solar control and high visibility.

The Ameriglass™ E2 Insulated Glass System features Low Emissivity glass coated with dual microscopic layers of silver, combined with TrueWARM® Structural Foam Spacer, Argon gas fill to create a dual sealed glass unit with superior energy efficiency and long-term durability.

Ameriglass™ AG3 and E2 Systems Provide:

- Maximum UV Protection
- Extremely Low Thermal Transmittance
- Superior Condensation Resistance
- Reduced Sound Transmission
- Long-term Durability
- Lifetime Warranty
- Energy Savings

All Amerimax windows with the Ameriglass™ IG system meet or exceed Energy Star® requirements in all climate zones.

All Amerimax Windows and Patio Doors are stringently tested by independent laboratories for:

- Thermal Performance, Structural Integrity, Air Infiltration, Water Resistance and Wind Loads
- Thermal performance tests are in accordance with NFRC Standards and requirements.
- Structural, air and water performance tests are to AAMA standards.
- Test results are certified and administered through Keystone Certifications, an ANSI accredited, licensed, independent certification agency.
